

# PALLAVI JADHAV

Full Stack Developer (Java / Spring Boot)

---

## PROFESSIONAL SUMMARY

Full Stack Developer with 1.5+years of experience building and deploying RESTful APIs and web applications using Java, Spring Boot, and React.js. Skilled in backend system design, MySQL/PostgreSQL database management, Agile/Scrum delivery, and CI/CD pipeline automation with Docker, Jenkins, GitHub Actions, and Azure DevOps. Experienced deploying and maintaining production applications on Linux servers with NGINX and SSL configuration. Strong problem-solving foundation in data structures, algorithms, and multithreading.

---

## CORE SKILLS

**Languages:** Java, JavaScript, C++, SQL

**Backend:** Spring, Spring Boot, Spring MVC, J2EE, RESTful APIs, FastAPI, Django

**Frontend:** React.js, HTML5, CSS3, Bootstrap, Responsive Design

**Databases:** MySQL, PostgreSQL

**CI/CD & DevOps:** Docker, Jenkins, GitHub Actions, Azure DevOps, NGINX, Linux

**Tools:** VS Code, IntelliJ IDEA, Eclipse, Postman, Git, GitHub, GitLab

**Servers:** Apache Tomcat, SSH

---

## PROFESSIONAL EXPERIENCE

**ValueDX** — Full Stack Developer

---

| Jan 2025 - Present

**QBot — Enterprise Chatbot Platform** | Team of 5 | Jan 2025 - Dec 2025

*TechStack:Java,SpringBoot,REST APIs, MySQL*

- Designed and developed multiple scalable RESTful APIs using Java, Spring Boot, and Spring MVC to power chatbot integration, data retrieval, and user query handling.
- Built backend business logic to process user queries and integrate multiple knowledge sources, enabling accurate, context-aware dynamic response generation.
- Optimized API performance and response times, directly improving end-user interaction quality and overall system throughput.
- Debugged and resolved recurring backend issues, strengthening system reliability and ensuring consistent product performance across the platform.

**AppStorePlatform** | ValueDX | Dec2025 - Present

*TechStack:React.js, FastAPI,MySQL, Docker, NGINX,Linux,GitHubActions*

- Designed and implemented CI/CD pipelines using Azure DevOps and GitHub Actions to streamline and automate build, test, and delivery workflows.
- Deployed and maintained FastAPI backend and React.js frontend applications on Linux servers, ensuring high availability and consistent uptime.
- Containerized multiple microservices using Docker and managed images on DockerHub for consistent, repeatable deployments.
- Configured NGINX reverse proxy, SSL certificates, and environment settings for secure and optimized application delivery.

**SalesTool** | DevOpsEngineer,Teamof5 | Dec2025 - Present

*Tech Stack: React.js, Python, MySQL, Docker, Jenkins, GitHub Actions, Linux*

- Deployed a full-stack application (React.js frontend, Python backend) on Linux-based cloud servers, ensuring high availability and stability.
- Built and managed CI/CD pipelines using Jenkins and GitHub Actions, streamlining automated build, test, and deployment workflows.
- Managed MySQL database operations including schema migration, backup, and performance tuning for reliable, efficient data management.
- Integrated CI/CD pipeline with Docker image build and push to container registry, ensuring consistent, repeatable deployments.
- Troubleshoot and resolved recurring deployment and environment issues, improving release stability across development and production environments.
